■ Installations

Company Narrative:

Terra Firm specializes in the seismic risk mitigation of operational and functional components (OFCs) of new and existing buildings. All the necessary services required to assure the earthquake resilience of the nonstructural elements of a building is available from within Terra Firm. Management services include: business continuity planning, seismic risk assessments, project management, mitigation training programs and seismic purchasing policy development. Seismic engineering supplies an automated OFC mitigation engineering system drawing on a large library of existing plans, stock shop drawings and a complete

■ Seismic Shop

documentation format. The Seismic Shop offers an array of versatile products designed for the realities of the worksite. Our installers have deep experience in the difficult and diverse environments found in boiler rooms, IT facilities and high level labs. With all seismic disciplines under one roof, our design roundtable can produce the highest performance systems at the lowest cost with the least disruption to the customers' operations.
