### Reasons for involvement with MCEER:

To contribute to the earthquake engineering community and to stay abreast of current research.

### Current topics of earthquake related research:

- Maps for engineering and underwriting of earthquake risk
- Approval protocol for seismic sway brace components
- Protocol for seismic gas shutoff valves

- **Cyclic testing** of seismic sway brace component.

### Company Narrative:

FM Global is an insurance organization with a unique risk management focus. Its customers look to the company to help them maintain continuity in their business operations, develop cost-effective insurance and risk financing solutions - and to minimize the overall financial impact if a loss does occur.

- FM Global's new **Research Campus** offers more advanced solutions to the risks associated with natural hazards.

FM Global clients rely on its world-renown scientific research and testing capabilities to help them better understand their property hazards and, ultimately, discover better ways to reduce exposure

- **Sway bracing** holds piping as rigid as possible, so that it moves (sways) with the building when an earthquake strikes.

to these risks. Organized through FM Global Research, a specialized group of scientists, engineers and technicians, FM Global's ground-breaking research often sets new standards that advance loss prevention practices and help develop new property loss prevention products.
