

TABLE OF CONTENTS

SECTION 1 INTRODUCTION.....	1
1.1 Scope of Report.....	1
1.2 Intent of Seismic Isolation Provisions.....	2
1.3 Analysis Procedures for Seismically Isolated Structures.....	3
SECTION 2 FORCE-DISPLACEMENT MODELS OF ISOLATORS.....	5
2.1 Introduction.....	5
2.2 Modeling Elastomeric Isolator Units.....	5
2.3 Modeling Sliding Isolator Units.....	7
2.4 Property Modification Factors.....	12
SECTION 3 TYPES OF PROPERTY MODIFICATIONS.....	17
3.1 Introduction.....	17
3.2 Aging and Environmental Effects: $\lambda_{ae,max}$ and $\lambda_{ae,min}$	17
3.3 Hysteretic Heating and History of Loading Effects: $\lambda_{test,max}$ and $\lambda_{test,min}$	21
3.4 Permissible Manufacturing Variations: $\lambda_{spec,max}$ and $\lambda_{spec,min}$	38
SECTION 4 TESTING REQUIREMENTS.....	43
4.1 Introduction.....	43
4.2 Qualification Testing.....	43
4.3 Prototype Testing.....	44
4.4 Production Testing.....	47
SECTION 5 PRELIMINARY DESIGN AND DESIGN SCENARIOS.....	49
5.1 Introduction.....	49
5.2 Preliminary Design for Elastomeric Isolation System.....	50
5.3 Preliminary Design for Sliding Isolation System.....	52
5.4 Design Scenarios for Detailed Analysis.....	55
SECTION 6 COMPUTING PROPERTIES FOR ELASTOMERIC ISOLATORS.....	57
6.1 Introduction.....	57

6.2	Lead-Rubber Isolators	57
6.3	Low-Damping Rubber Isolators.....	67
6.4	Similar Unit Criteria.....	72
6.5	Test Specimen Adequacy Criteria.....	77
SECTION 7 COMPUTING PROPERTIES FOR SLIDING ISOLATORS.....		83
7.1	Introduction	83
7.2	Prototype Isolators.....	83
7.3	Similar Unit Criteria.....	97
7.4	Test Specimen Adequacy Criteria.....	99
SECTION 8 SUMMARY OF ISOLATION SYSTEM PROPERTIES.....		105
8.1	Elastomeric Isolation System.....	105
8.2	Sliding Isolation System.....	113
SECTION 9 NONLINEAR RESPONSE HISTORY ANALYSIS		121
9.1	Introduction	121
9.2	Elastomeric Isolation System.....	122
9.3	Sliding Isolation System.....	127
SECTION 10 SUMMARY AND CONCLUSIONS		133
SECTION 11 REFERENCES.....		137
APPENDIX A GENERAL BUILDING INFORMATION		139
A.1	General Information	139
A.2	Building Geometry.....	139
A.3	Assembly Weights.....	141
A.4	Design Spectral Accelerations	142
A.5	Ground Motions	142
APPENDIX B PRELIMINARY DESIGN OF ELASTOMERIC ISOLATION SYSTEM.....		145
B.1	Introduction	145
B.2	Isolation Systems Characteristic Strength, $Q_{d,total}$	146
B.3	Isolation System Post-Elastic Stiffness, $K_{d,total}$	147

B.4	Lower Bound MCE Displacement	148
B.5	Isolator Axial Loads and Uplift Potential	149
B.6	Rubber Layer Thickness Required for Isolator Stability	153
APPENDIX C PRELIMINARY DESIGN OF SLIDING ISOLATION SYSTEM.....		157
C.1	Introduction	157
C.2	Isolator Geometric Parameters	158
C.3	Design Based on Recommended Isolator Data	159
C.4	Design Based on Qualification Data	160
APPENDIX D ASCE 7-2016 CHAPTER 17 PROPOSAL WITH CHANGES PROPOSED BY AUTHORS OF THIS REPORT		165
APPENDIX E ASCE 7-2016 COMMENTARY- DEFAULT LAMBDA FACTORS		193

This Page is Intentionally Left Blank

LIST OF FIGURES

Figure	Title	Page
2-1	Idealized Bilinear Force-Displacement Relation of a Lead-Rubber Isolator.....	6
2-2	Rigid-Linear Force-Displacement Behavior of FP Isolators	8
2-3	Triple Friction Pendulum Cross Section, Definition of Parameters	9
2-4	Tri-linear Force-Displacement Behavior of Special Triple FP up to Regime II.....	12
2-5	Upper and Lower Bound Isolator Force-Displacement Properties.....	15
3-1	Concept of Bounding the Hysteretic Heating and History of Loading Effects	24
3-2	NED for Various Isolation System Properties based on Bi-Directional RHA.....	26
3-3	Effects of Scragging on a Rubber Isolator.....	30
3-4	Scragging Effects for a Range of Elastomeric Isolator Types.....	31
3-5	Effect of Hysteretic Heating on the EDC for Lead-Rubber Isolators.....	33
3-6	Effect of Sliding Velocity on the Coefficient of Friction for PTFE-Stainless Steel Interfaces	36
3-7	Effect of Axial Load on the Coefficient of Friction in Friction Pendulum Isolators.....	36
3-8	Hypothetical Illustration of Specification Tolerances	40
5-1	Schematic of Isolator Layout for Lead-Rubber Isolation System	52
5-2	Schematic of Isolator Layout for Sliding Isolation System.....	54
5-3	Continuum of Quantity and Quality of Test Data vs. Range in Isolation System Properties.....	56
6-1	Tested Lead-Rubber Isolator Unit Details	58
6-2	Lateral Force-Displacement Loops of Isolator No. 1	58
6-3	Lateral Force-Displacement Loops of Isolator No. 2	59
6-4	Graphical Calculation of the Post-Elastic Stiffness, Loop 2 Isolator No. 1	61
6-5	Measured and Calculated Effective Yield Stress of Lead	65
6-6	Tested Low-Damping Natural Rubber Isolator Details	67
6-7	Lateral Force-Displacement Loops of Isolator No. 3	68
6-8	Lateral Force-Displacement Loops of Isolator No. 4	68
6-9	Graphical Calculation of the Post-Elastic Stiffness, Loop 1 Isolator No. 3	69
6-10	Graphical Calculation of the Post-Elastic Stiffness, Loop 3 Isolator No. 3	70
7-1	Cross-Section and Details of Tested Triple Friction Pendulum Isolator	84
7-2	Dynamic Force-Displacement Behavior of Prototype Isolator 1: Test 1.....	86
7-3	Dynamic Force-Displacement Behavior of Prototype Isolator 1: Test 2.....	86
7-4	Dynamic Force-Displacement Behavior of Prototype Isolator 2: Test 1.....	87
7-5	Dynamic Force-Displacement Behavior of Prototype Isolator 2: Test 2.....	87
7-6	Graphical Measure of Properties of Prototype Isolator 1 for Test 1.....	89

7-7	Graphical Calculation of Properties of Prototype Isolator 1 for Test 2	90
7-8	Estimate of Area for Calculating Friction μ_B , Isolator 1, Test 1, Cycle 1	91
7-9	Theoretical and Actual Force-Displacement Behavior: Prototype Isolator 1, Test 1	93
7-10	Three-Cycle Average Coefficient of Friction μ_A of 43 Production Isolators (1348kN Test 2)	95
7-11	Theoretical and Actual Force-Displacement Behavior for Isolator 2, Test 1	101
8-1	Idealized Force-Displacement of Lead-Rubber Isolator using Default Properties	112
8-2	Idealized Force-Displacement of Lead-Rubber Isolator using Prototype Properties	112
8-3	Idealized Force-Displacement of Lead-Rubber Isolator using Production Isolator Properties	113
8-4	Tri-linear Model for Interior Isolator using Default Properties	119
8-5	Tri-linear Model for Interior Isolator using Prototype Properties	120
8-6	Tri-linear Model for Interior Isolator using Production Properties	120
9-1	F- δ Loops of Elastomeric Isolators for Motion GM3, Default Lambda Factors	125
9-2	F- δ Loops of Elastomeric Isolators for Motion GM3, Prototype Lambda Factors.....	126
9-3	F- δ Loops of Elastomeric Isolators for Motion GM3, Production Lambda Factors.....	126
9-4	F- δ Loops of FP Isolation System for Motion GM3, Default Lambda Factors.....	130
9-5	F- δ Loops of FP Isolation System for Motion GM3, Prototype Lambda Factors	131
9-6	F- δ Loops of FP Isolation System for Motion GM3, Production Lambda Factors	131
A-1	Typical floor and roof framing plan	139
A-2	Three-Dimensional Extruded Sections SAP200 Model	140
A-3	Response Spectrum for Scaled Ground Motions and MCE_R	140
A-4	Response Spectrum for Scaled Ground Motions and MCE_R	143
B-1	Preliminary Design Procedure for Elastomeric Isolation System.....	146
C-1	Special Triple Friction Pendulum Isolator Detail	158

LIST OF TABLES

Table	Title	Page
2-1	Force-Displacement Behavior for a “Special” Triple FPR Isolator.....	10
2-2	Schematics of Force-Displacement Behavior for “Special” Triple FP Isolator.....	11
3-1	Aging and Environmental Lambda Factors for Elastomeric Isolators.....	19
3-2	Aging and Environmental Lambda Factors for Sliding Isolators	21
3-3	Peak Response of Analyzed Structure.....	28
3-4	Testing Lambda Factors for Elastomeric Isolators	35
3-5	Testing Lambda Factors for Sliding Isolators.....	38
3-6	Specification Lambda Factors	41
5-1	Rubber and Natural Rubber Isolator Dimensions obtained from Appendix B	50
5-2	Elastomeric Isolation System Compression Loads.....	52
5-3	Sliding Isolation System Compression Loads	55
6-1	Mechanical Properties of Two Prototype Lead-Rubber Isolators	60
6-2	Mechanical Properties of Two Prototype Low-Damping Rubber Isolators	71
6-3	Comparison of Governing Dimensions	73
6-4	Comparison of Energy Dissipated per Cycle.....	74
6-5	Comparison of Shear Strain and Vertical Stress.....	76
6-6	Tested Prototype Elastomeric Isolator Shear Moduli Criteria.....	79
6-7	Tested Prototype Lead-rubber Isolator No. 1 Properties	81
7-1	Test 1 Data for Prototype Triple FP Isolators.....	88
7-2	Test 2 Data for Prototype Triple FP Isolators.....	88
7-3	Frictional Properties of Isolator at Load of 2710kN (609kip) from Test 1	93
7-4	Frictional Properties of Isolator at Load of 1348kN (303kip) from Test 2	94
7-5	Effective Stiffness of FP Isolators	102
7-6	Effective Damping of FP Isolators	103
8-1	Nominal Properties from Prototype Test Data used for all Examples.....	105
8-2	Default Lambda Factors in Absence of Qualification Data for Elastomeric Isolation System	107
8-3	Lambda Factors from “Similar” Units for Elastomeric Isolation System	108
8-4	Lambda Factors from Actual Prototype Isolators for Elastomeric Isolation System	109
8-5	Lambda Factors Based on Data from Production Isolators for Elastomeric Isolation System.....	111
8-6	Nominal Properties from Prototype Test Data used for all Examples.....	114
8-7	Nominal μ_1 and Lambda Factors- Default Values in Absence of Qualification Data	116
8-8	Nominal μ_1 and Lambda Factors- Prototype/Similar Test Data Available.....	117

8-9	Coefficient of Outer Surfaces Friction μ_1 and Lambda Factors- Production Test Data	118
9-1	NLRHA of Elastomeric Isolation System using Properties based on Default λ Factors	123
9-2	NLRHA of Elastomeric Isolation System using Properties based on Prototype λ Factors	123
9-3	NLRHA of Elastomeric Isolation System using Properties based on Production λ Factors	124
9-4	Ratio of Lambda Factors and Bounding Analysis for Elastomeric Isolation System.....	124
9-5	NLRHA of Sliding Isolation System using Properties based on Default λ Factors	128
9-6	NLRHA of Sliding Isolation System using Properties based on Prototype λ Factors	128
9-7	NLRHA of Sliding Isolation System using Properties based on Production λ Factors	129
9-8	Ratio of Lambda Factors and Bounding Analysis for Sliding Isolation System	129
A-1	SEAOC Manual Horizontal Ground Motions and Scale Factors	143
B-1	Preliminary Design Structural Overturning, Iteration 1	151
B-2	Preliminary Design Iterations, SI Units	155
B-3	Preliminary Design Iterations, Imperial Units	156
