# TABLE OF CONTENTS

**SECTION 1**  
**INTRODUCTION TO THE EVALUATION OF EXISTING STRUCTURES**  
1-1  
1.1 Motivation ................................................................. 1-1  
1.2 Background and Previous Research .................................. 1-2  
1.3 Discussion of Seismic Design Philosophies ....................... 1-4  

**SECTION 2**  
**DESCRIPTION OF TYPICAL STRUCTURE**  
2-1  
2.1 General Aspects of the Gravity-Load Designed Building ....... 2-1  
2.2 Characteristic Behavior of Gravity-Load-Designed Structures ... 2-3  

**SECTION 3**  
**MODELLING OF BUILDING FOR INELASTIC ANALYSIS**  
3-1  
3.1 Computational Tool: IDARC ............................................. 3-1  
3.2 Modelling of Discontinuous Positive Reinforcement ............ 3-2  
3.3 Modelling of Joint Shear Capacity .................................. 3-5  
3.4 Modelling of Confinement ............................................. 3-17  
3.5 Calibration of Hysteretic Parameters ............................... 3-19  
3.5.1 Calibration of Hysteretic Parameters for Overall Structural Response .... 3-19  
3.5.2 Calibration of Hysteretic Parameters for Individual Members .... 3-19  

**SECTION 4**  
**EVALUATION METHODOLOGY**  
4-1  
4.1 Selection of Ground Motions ......................................... 4-1  
4.2 Inelastic Time History Analyses ..................................... 4-5  
4.3 Damage Modelling ..................................................... 4-6  

**SECTION 5**  
**EVALUATION OF NON-SEISMIC DETAILED STRUCTURE**  
5-1  
5.1 Interpretation of Results ............................................. 5-1  
5.2 General Performance of Non-Seismically Detailed Structure .... 5-8  

**SECTION 6**  
**INTRODUCTION TO SEISMIC DETAILING STRATEGIES**  
6-1  
6.1 Alternatives for Enhanced Seismic Resistance .................... 6-1  
6.2 Illustration of Detailing Strategies ................................ 6-2
SECTION 7  EVALUATION OF DETAILING STRATEGIES  7-1

  7.1  Description of Comparative Study .................................................. 7-1
  7.2  Effect of Detailing Strategies in Joint Region .................................. 7-2
  7.2.1 Effect of Continuing Positive Reinforcement in Beams (CPR vs. REAL) ..... 7-13
  7.2.2 Effect of Ensuring Joint Shear Capacity (DPR vs. REAL) ..................... 7-13
  7.2.3 Effect of Ensuring Full Joint Strength (JSP vs. REAL) ...................... 7-14
  7.3  Effect of Beam and Column Confinement ......................................... 7-15
  7.3.1 Effect of Increasing Level of Confinement ..................................... 7-20
  7.4  Summary and Comparison of Member Damage ..................................... 7-20

SECTION 8  COSTS & CONSEQUENCES OF IMPROVED DETAILING IN NEW
CONSTRUCTION  8-1

SECTION 9  CONCLUDING REMARKS  9-1

  9.1  Existing GLD Structures ................................................................. 9-1
  9.2  Enhanced Detailing for New Construction and
       Principles of Seismic Retrofit ....................................................... 9-2
  9.3  Recommendations for Newly Designed Structures ................................ 9-4

SECTION 10  REFERENCES  10-1

APPENDIX A  MEMBER SECTION PROPERTIES  A-1

APPENDIX B  BEAM AND COLUMN DAMAGE INDICES  B-1

APPENDIX C  MAXIMUM STORY DRIFTS AND STORY SHEARS  C-1
