Notable Seismic Projects:

KPFF is a recognized leader in the seismic design of new and renovated structures for healthcare, mission critical, commercial, and biotechnology facilities. As a pioneer in performance based seismic design, KPFF has designed 15 base isolated structures, including four hospitals.

Reasons for involvement with MCEER:

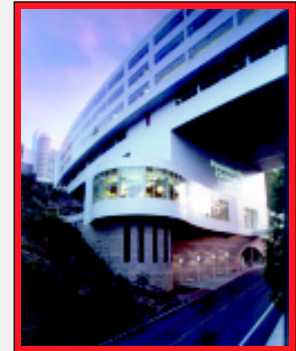

To learn from and contribute to new developments in earthquake engineering.

Company Narrative:

KPFF provides structural and civil engineering services, both as consultant and prime designer. Maintaining a leadership role within the industry, KPFF is committed to the highest standards while fostering technical innovation and creativity. The company has an outstanding record of service, providing quality consulting and design services to their clients. Founded in Seattle in 1960, KPFF has operating divisions in Seattle and Tacoma, Washington; Portland, Oregon; San Francisco, Los Angeles, Irvine and San Diego, California; Phoenix, Arizona; and McLean, Virginia.

- **Arrowhead Regional Medical Center**, a base-isolated hospital, is located adjacent to two of California's most active faults.

- **Doernbecher Hospital** located in Portland won the 1999 Grand Conceptor Award from the American Consulting Engineers Council.
