Table 9.35: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 310 obtained using the lumped-mass stick model and the equivalent fixed-base model in OpenSees (EFB_OpenSees) ..................... 354

Table 9.36: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 538; lumped-mass stick model ........................................................................ 356

Table 9.37: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 538; equivalent fixed-base model in OpenSees (EFB_OpenSees) .................... 356

Table 9.38: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 538 obtained using the lumped-mass stick model and the equivalent fixed-base model in OpenSees (EFB_OpenSees) ......... 356

Table 9.39: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 2137 (isolated basemat); lumped-mass stick model, 2% Rayleigh damping .......... 359

Table 9.40: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 2137 (isolated basemat); lumped-mass stick model, 10% Rayleigh damping ........ 359

Table 9.41: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 2137 (isolated basemat) obtained using 2% and 10% Rayleigh damping, lumped-mass stick model ................................................. 359

Table 9.42: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 310; lumped-mass stick model (ASB), 2% Rayleigh damping .............. 360

Table 9.43: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 310; lumped-mass stick model (ASB), 10% Rayleigh damping ............ 360

Table 9.44: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 310 (ASB) obtained using 2% and 10% Rayleigh damping, lumped-mass stick model ......................................................... 360

Table 9.45: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 417 (SCV); lumped-mass stick model, 2% Rayleigh damping ............... 361

Table 9.46: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 417 (SCV); lumped-mass stick model, 10% Rayleigh damping .................. 361
LIST OF TABLES (CONT’D)

Table 9.47: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 417 (SCV) obtained using 2% and 10% Rayleigh damping, lumped-mass stick model ................................................................. 361

Table 9.48: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 538 (CIS); lumped-mass stick model, 2% Rayleigh damping .......................................................... 362

Table 9.49: Mean peak zero-period accelerations (g) for 30 ground motion sets at node 538 (CIS); lumped-mass stick model, 10% Rayleigh damping ................................................... 362

Table 9.50: Percentage reduction in means of peak zero-period accelerations (g) for 30 ground motion sets at node 538 (CIS) obtained using 2% and 10% Rayleigh damping, lumped-mass stick model ........................................................................ 362

Table A.1: Single bearing test sequence ........................................................................................................ 384

Table A.2: Failure states of bearings under tensile load .................................................................................. 403

Table B.1: Percentiles of peak horizontal displacement (mm) for 30 ground motion sets; heating effects1 ........................................................................................................................................ 410

Table B.2: Percentiles of peak horizontal shearing force (% W) for 30 ground motion sets; heating effects1, 2 .................................................................................................................. 410

Table C.1: Nodes and mass properties for structural model (units: kip, feet, seconds) ..................................... 415

Table C.2: Element properties for structural model (units: kip, feet, seconds) .................................................... 417

Table C.3: Modal properties of the Auxiliary Shield Building (ASB) ................................................................ 420

Table C.4: Modal properties of the Steel Containment Vessel (SCV) .............................................................. 421

Table C.5: Modal properties of the Containment Internal Structure (CIS) ....................................................... 422

Table C.6: Location of the center of gravities .................................................................................................. 424

Table C.7: Percentiles of peak horizontal displacement (mm) for 30 ground motion sets; simplified model1 ........................................................................................................................................ 426

Table C.8: Percentiles of peak horizontal shearing force (% W) for 30 ground motion sets; simplified model1, 2 .................................................................................................................. 426

Table C.9: Percentiles of peak compressive displacement (mm) for 30 ground motion sets; simplified model1 ........................................................................................................................................ 427

Table C.10: Percentiles of peak compressive force (% W) for 30 ground motion sets; simplified model1, 2 ...................................................................................................................... 427

Table C.11: Percentiles of peak tensile displacement (mm) for 30 ground motion sets; simplified model1 ........................................................................................................................................ 428

Table C.12: Percentiles of peak tensile force (% W) for 30 ground motion sets; simplified model1, 2 ...................................................................................................................... 428
Table C.13: Percentiles of peak torsion (degrees) for 30 ground motion sets; simplified model¹ ................................................................. 429

Table C.14: Percentiles of peak rotation (degrees) about X axis for 30 ground motion sets; simplified model¹ ................................................................. 429

Table C.15: Percentiles of peak rotation (degrees) about Y axis for 30 ground motion sets; simplified model¹ ................................................................. 429

Table C.16: Percentiles of peak horizontal displacement (mm) for 30 ground motion sets; advanced model¹ ......................................................................................... 430

Table C.17: Percentiles of peak horizontal shearing force (% $W$) for 30 ground motion sets; advanced model¹, ² .......................................................................................... 430

Table C.18: Percentiles of peak compressive displacement (mm) for 30 ground motion sets; advanced model¹ ......................................................................................... 431

Table C.19: Percentiles of peak compressive force (% $W$) for 30 ground motion sets; advanced model¹, ² .......................................................................................... 431

Table C.20: Percentiles of peak tensile displacement (mm) for 30 ground motion sets; advanced model¹ ......................................................................................... 432

Table C.21: Percentiles of peak tensile force (% $W$) for 30 ground motion sets; advanced model¹, ² .......................................................................................... 432

Table C.22: Percentiles of peak torsion (degrees) for 30 ground motion sets; simplified model¹ ......................................................................................... 433

Table C.23: Percentiles of peak rotation (degrees) about X axis for 30 ground motion sets; simplified model¹ ......................................................................................... 433

Table C.24: Percentiles of peak rotation (degrees) about Y axis for 30 ground motion sets; simplified model¹ ......................................................................................... 433

Table C.25: Percentiles of temperature rise (°C) in the lead core for 30 ground motion sets; advanced model ......................................................................................... 434

Table C.26: Percentiles of shear characteristic strength (ratio of initial) for 30 ground motion sets; advanced model¹ ......................................................................................... 434

Table C.27: Number of bearings (of 273) for which buckling is predicted due to each ground motion set at four shaking intensities; advanced model ......................................................................................... 435

Table C.28: Number of bearings (of 273) for which cavitation is predicted due to each ground motion set at four shaking intensities; advanced model ......................................................................................... 436
